

Attachment E to Commercial Terms of Service (Enterprise)

Dedicated Fiber Internet Service ("DFI Service") (Formerly known as Fiber Internet Access Service)

Dedicated Fiber Internet. If Customer elects to receive the DFI Service, Spectrum shall provide Customer with a dedicated, scalable connection over a packet-based infrastructure with Internet service provider ("ISP") peering between Customer's data network identified on a Service Order and Spectrum's facilities.

DFI Service, or features of DFI Service, may not be available in all service areas. Spectrum's DFI Service is "On-Net" if it is provided by Spectrum to Service Locations through the Spectrum Network. Spectrum may, in its discretion, provide Customer with "Off-Net" services to geographic locations that are outside of Spectrum's service area or are not currently connected to the Spectrum Network through third-party service providers. In addition, certain non-facilities-based services provided by third parties may be offered to Customer by Spectrum ("Third-Party Services"). Third-Party Services and Off-Net Services may be subject to additional terms and conditions.

Customer's use of the DFI Service is subject to the following additional terms and conditions:

1. DFI Service Speeds. Spectrum shall use commercially reasonable efforts to achieve the Internet speed attributable to the bandwidth for the DFI Service selected by Customer on the Service Order, however, actual speed, also known as throughput rate, may vary. Many factors affect speed experienced by Customer as outlined in Spectrum's Network Management Practices.

2. Bandwidth Management. Spectrum shall have the right, but not the obligation, to (a) monitor traffic on its Network; and (b) monitor Customer's bandwidth utilization as Spectrum deems appropriate to efficiently manage the Spectrum Network.

3. Acceptable Use Policy. Customer shall comply with the terms of Spectrum's Acceptable Use Policy ("AUP") found at <https://enterprise.spectrum.com> (or the applicable successor URL) and that policy is incorporated by reference into this Service Agreement. Customer represents and warrants that Customer has read the AUP and shall be bound by its terms as they may be amended, revised, replaced, supplemented or otherwise changed from time-to-time by Spectrum with or without notice to Customer. Spectrum may suspend Service immediately for any violation of the Spectrum AUP.

4. DDoS Protection Services.

(a) This Section only applies if Customer elects to purchase Distributed Denial of Service ("DDoS") Protection Service which must be purchased in conjunction with Spectrum's Dedicated Fiber Internet Service. The DDoS Protection Service enables detection of DDoS attacks and provides related mitigation services. Spectrum monitors Customer Internet traffic as it traverses the Spectrum Network to detect anomalies that are symptomatic of a volumetric DDoS attack, as reasonably determined by Spectrum (a "DDoS Attack"). Spectrum requires that Customer: (i) provide information regarding Customer's Internet traffic before Spectrum can provision the DDoS Protection Service, and (ii) cooperate with Spectrum to conduct mitigation testing in order to activate the DDoS Protection Service.

After DDoS Protection Service activation, Spectrum will monitor Customer's Dedicated Fiber Internet (DFI) network traffic flow for variations to the baseline traffic patterns. When the DDoS Protection Service detects an anomaly that is symptomatic of a DDoS Attack, Spectrum will notify the Customer. The DDoS Protection Service and associated countermeasures are configured to reduce disruption of Customer's legitimate traffic, but Customer may experience slower Internet traffic speed during a DDoS Attack. Spectrum will remove the countermeasures and redirect Customer's inbound network traffic to its normal path once Spectrum determines that the DDoS Attack has ended and there is no activity symptomatic of a DDoS Attack for a minimum of 4 hours. Customer may request status updates and reports from Spectrum. Customer may designate whether Spectrum is to provide "Proactive" or "Reactive" mitigation services as further described below. If Customer has designated Proactive mitigation, Customer may switch to Reactive mitigation, and if Customer designated Reactive mitigation, Customer may switch to Proactive mitigation, at any time during the Initial Order Term. Spectrum will use commercially reasonable efforts to implement Customer's change request within five (5) business days of receipt of Customer's request.

(b) DDoS Proactive Mitigation Services. If Customer designates Proactive mitigation services, following service activation, Spectrum will automatically implement countermeasures upon Spectrum's detection of a DDoS Attack.

(c) DDoS Reactive Mitigation Services. If Customer designates Reactive mitigation services, Customer understands that Spectrum will not automatically initiate any DDoS countermeasures unless and until a Customer representative calls Spectrum to notify Spectrum that Customer may be experiencing a DDoS Attack. If Spectrum has an existing ticket indicating detection of a DDoS Attack, Spectrum will use commercially reasonable efforts to initiate countermeasures within 15 minutes.

(d) Customer Requirements. DDoS Protection Services are only available in connection with Spectrum's On-Net DFI Services and are not available in all locations. Spectrum's DDoS Protection Service is provided on an DFI connection by DFI connection basis. In the event Customer has more than one DFI connection advertising the same IP address(es), Customer is required to purchase DDoS Protection Service for each DFI connection. Spectrum's ability to provide the DDoS Protection Services is contingent on (i) Customer providing accurate and timely information to Spectrum, including IP addresses and (ii) Customer-provided equipment and software being compatible with the DDoS Protection Service as determined by Spectrum in its sole discretion.

(e) Disclaimers. Customer acknowledges the following additional terms for the DDoS Protection Services:

- i. SPECTRUM DOES NOT SUPPORT, AND SHALL HAVE NO OBLIGATION TO PROVIDE, MITIGATION WITH RESPECT TO IPv6.
- ii. DDoS mitigation only mitigates the effects of certain types of DDoS attacks and is not designed as a comprehensive security solution. When Customer Internet traffic is traveling over the Spectrum Network, Spectrum makes no guarantees that only DDoS attack traffic will be prevented from reaching the destination or that only legitimate traffic will reach Customer.
- iii. Spectrum makes no warranty, express or implied, that: (1) with respect to DDoS Protection Service, all DDoS attacks will be detected; (2) DDoS Protection Service will successfully mitigate the incident, including without limitation if the DDoS attack generates a traffic volume that exceeds the amount of traffic that Spectrum can divert; or (3) the DDoS Protection Services will be uninterrupted or error-free.

(f) Termination.

If Customer terminates any DFI Service for which Customer has also subscribed to DDoS Protection Service for any reason other than Spectrum's material, uncured breach, then Customer shall be deemed to have terminated the corresponding DDoS Protection Service and Customer shall pay any applicable Termination Charges in accordance with the Service Agreement.

5. Data Center Cross Connect. A "Cross Connect" shall mean a connection between two networks within a data center. If Spectrum needs to connect its Network to Customer's network within a data center or to a third-party's network within a data center to deliver Spectrum DFI Service to Customer, then a Cross Connect will be required where an external network-to-network interface (ENNI) connection is not used/unavailable. In such case, Customer may obtain the Cross Connect from the data center operator to make the connection to Spectrum's Network or Customer can request that Spectrum purchase and coordinate installation of the Cross Connect, and if Spectrum agrees, Customer must execute a Service Order reflecting the applicable MRC and any OTC.

6. Public, Education, and Governmental ("PEG") Video Service. This Section only applies if Customer elects to purchase PEG Video Service. Spectrum will install a video encoder at the Service Location together with a private fiber underlay transport to deliver video and audio signals from a PEG Customer's Service Location to Spectrum's hub site or headend facility to enable cablecasting to Spectrum's cable service subscribers.

7. Broadcaster Video Service. This Section only applies if Customer elects to purchase Broadcaster Video Service. Spectrum will install a video encoder at the Service Location together with a private fiber underlay transport to deliver video and audio signals from a broadcaster Customer's Service Location to Spectrum's hub site or headend facility to enable delivery on Spectrum's video network.
