The right solutions for network integration in healthcare

Providers are searching for solutions to integrate with their existing infrastructure while maintaining the highest standards of care. Choosing the right solutions and partners is key to managing the complexities of connecting dispersed facilities and optimizing the speed and effort of integration.

Every consolidation is unique, and the solutions needed to maximize ROI and minimize downtime will vary. Healthcare IT experts from Spectrum Business® can design, replace or enhance an existing network so your team can continue to deliver vital services and free up IT resources to help your organization innovate and grow.

Dedicated Fiber Internet provides dedicated and reliable connectivity optimized to facilitate sharing of electronic health records (EHRs), diagnostic imaging and test results between affiliate facilities. Fiber internet gives remote sites speedy access to centralized records and cloud-based applications.

Ethernet Services help you meet ever-growing data needs by connecting locations with a fast, reliable wide area network (WAN) solution. Organizations can scale as needed to support increased bandwidth needs for business continuity and disaster recovery. Additionally, Ethernet Services provide network visibility through a secure portal, allowing IT staff to proactively monitor and report on the network.
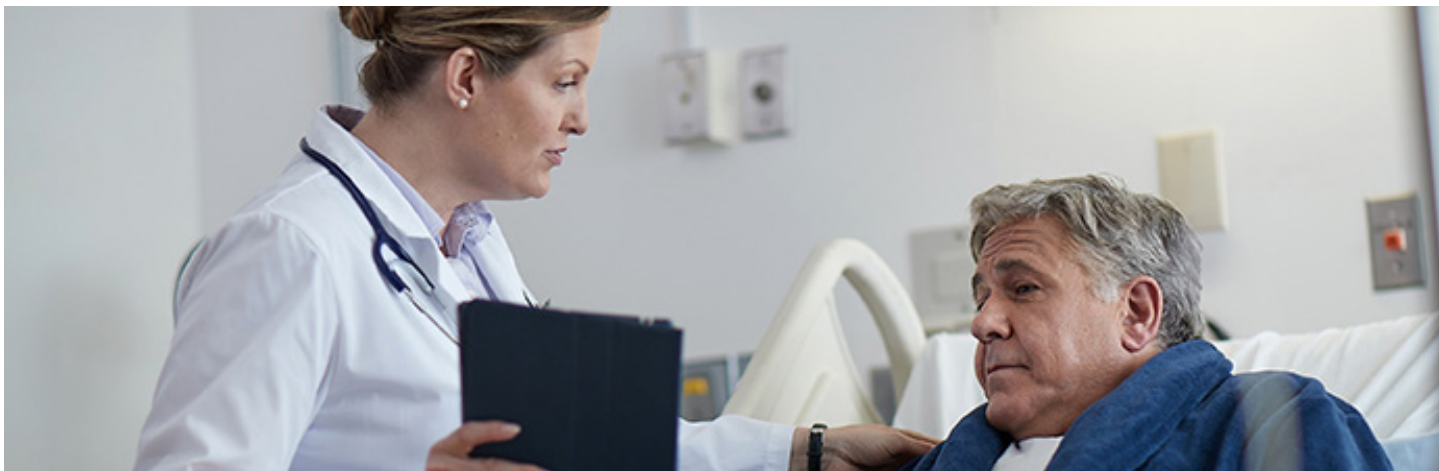

Cloud Connect, as an extension of the Spectrum Business Ethernet Service, provides dependable, private connections to leading cloud platforms like Amazon Web Services, Google Cloud and Microsoft Azure. Because the connection is private and shielded from public traffic, Cloud Connect reduces the risk of protected health information (PHI) being compromised and provides a strong, reliable connection to your cloud-based applications when you need it most.

Managed Network Edge: Simplify the deployment and management of your network with this modular, all-in-one solution. Delivered over the Cisco Meraki platform, Managed Network Edge offers security features, routing, SD-WAN, WiFi, switching, smart cameras, environmental sensors and the ability to work from anywhere there is an internet connection. Achieve flexibility, scalability with connectivity, equipment and network management from a single partner.

Enterprise Network Edge: Improve the network experience for your teams with an enterprise-grade managed solution that brings together connectivity, equipment and network management to support both hybrid networks and workforces. Powered by Fortinet, the solution simplifies IT operations by providing secure networking with optional integrated WiFi and switching in a multi-cloud-ready platform.

Unified Communications with RingCentral: Unified Communications (UC) with RingCentral seamlessly combines messaging, video conferencing, phone calling and more into a single platform. UC with RingCentral includes simplified deployment options, improved self-management capabilities and standardized application integrations.
