# Working from anywhere just became less work for healthcare providers
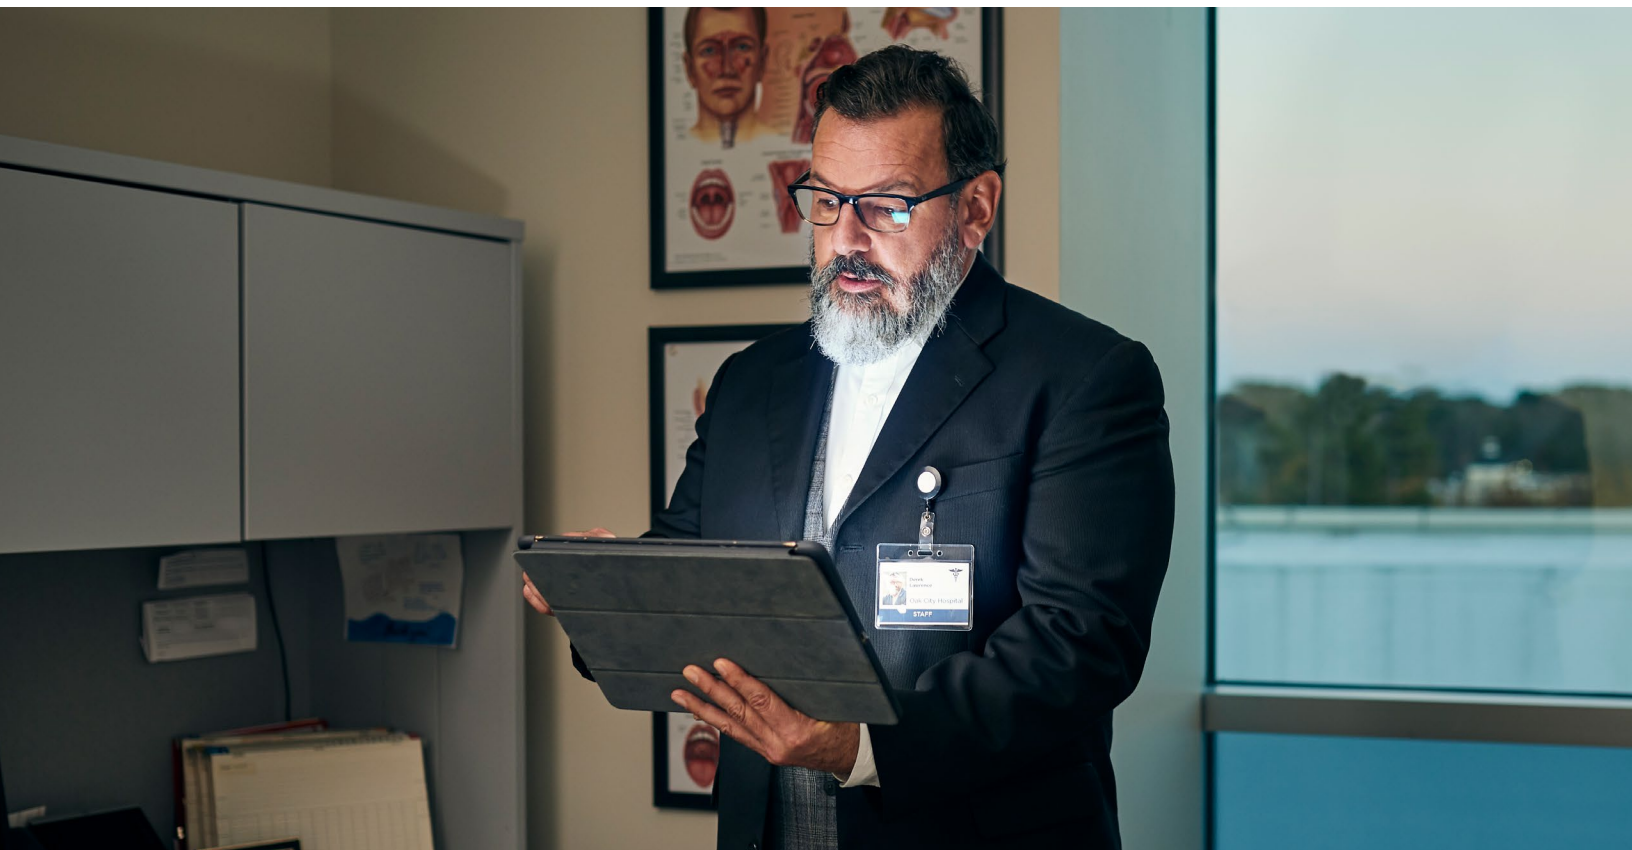

Managed Network Edge makes it simple for healthcare organizations to connect, collaborate and securely access the data they need.

Give your workers a better remote experience with dependable network connectivity, cloud access and online protection while working from home or on the road. Managed Network Edge makes it simple to deliver the security and consistency healthcare providers need to do their best work, whether accessing your network directly at your office or from an external location.

45% of healthcare leaders expect a larger share of their workforce will work outside the office permanently after going full-time remote during the pandemic.[1]

Network solutions for how you work today

Make networking simpler with Managed Network Edge

Modernize your network and free up IT resources for critical priorities when you adopt a modular, all-in-one solution that simplifies the deployment and management of your organization's network.

Managed Network Edge, powered by Cisco Meraki, provides firewall, local area network (LAN), switching, software-defined wide area network (SD-WAN) and wireless networks in a single platform with an intuitive management portal you can access from anywhere. Scalable and flexible, Managed Network Edge is offered as a managed service to give your organization the exact level of control and support you need to achieve your goals.

Connect employees quickly and easily with Teleworker

Give at-home workers the same performance and security they rely on when working in the office. Teleworker is a portable and easy-to-install device that connects employees working from home to the resources of a Managed Network Edge network, including a secure firewall. In just a few steps, your staff can connect safely to your network.

Optimized to make working away from the office no big deal, Teleworker prioritizes your organization's data over personal data to ensure work gets done. Additionally, practices may purchase a Spectrum Business Internet connection to use with Teleworker for employees who do not want to use their personal internet service for work.

Provide secure, reliable connections to your network with Remote Access

Remote Access equips healthcare workers, who are traveling, with encrypted access to your network through any internet connection. In addition, it provides mobile employees with the same firewall protection and threat management available in the office.
