

Does your city need to build its own fiber network?

All communities should be able to provide faster fiber connections to their business constituents — they just don't need to do it alone.

6 reasons to partner with an established fiber provider

You need

Broadband connectivity sooner rather than later

Expert resources to plan, build and maintain your network

A reliable, high-performing network you can count on

A network that can grow with your city

Superior customer service

Lower costs

We provide

Up to 10 Gbps private, dedicated fiber service to a building within 30-120 days¹ on an existing nationwide fiber network.

More MEF-certified professionals than any other provider,² and more than 20 years of experience supporting large enterprises.

Service level agreements guaranteeing 99.99 percent network uptime, a four-hour mean time to restore (MTTR), not just respond, and a 24/7/365 network operating center, already existing today.

We have invested over \$2 billion dollars and continue to invest in the superiority of our fiber network. We are adding, on average, more than 50 fiber-lit buildings to our network every day.

Local, dedicated government client account support, a client portal for increased visibility into your network, and a commitment to continuous improvement towards an effortless client experience.

Competitive, flat-rate pricing and strategic consultative partnerships to build a customized fiber program that meets your needs.

Take your city into the future and learn more about the advantages of partnering with an expert fiber provider.
