

# Enterprise Network Edge for hospitality

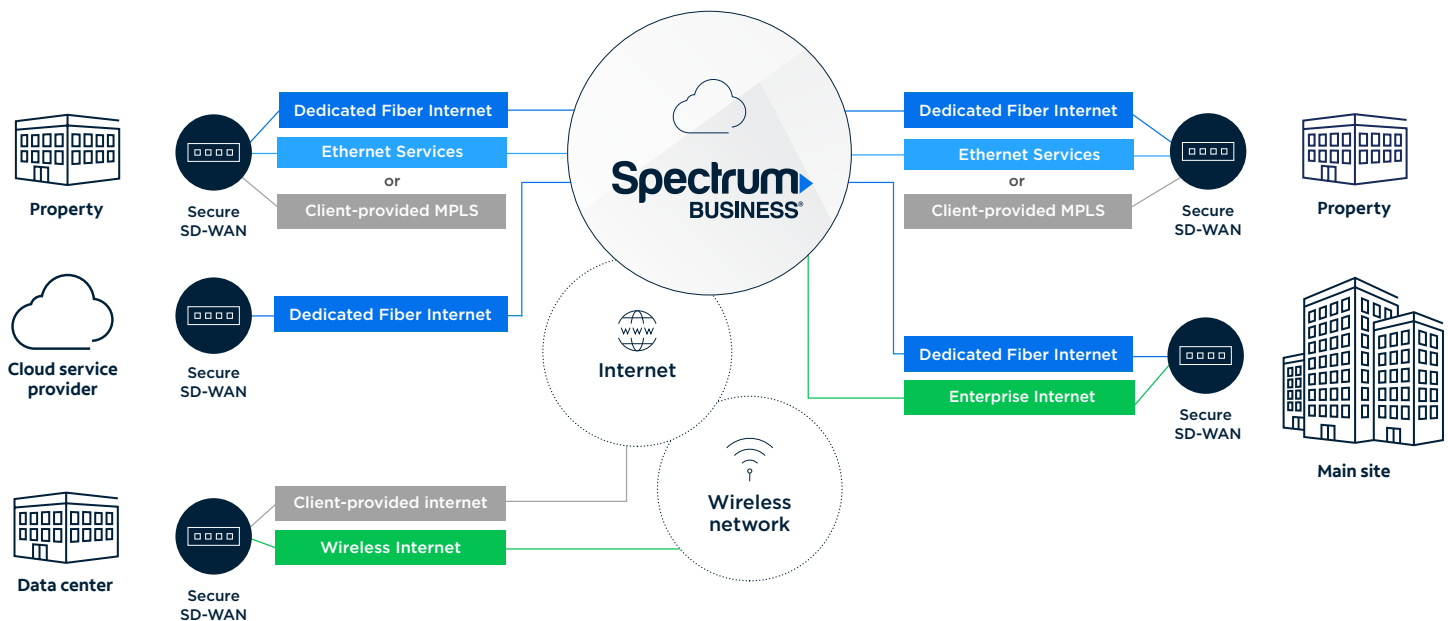

## Providing secure, uncompromising performance as your network needs evolve

Enterprise Network Edge gives large brands, hotels and hospitality management the ability to transition to a hybrid network architecture built around advanced SD-WAN technologies. Powered by Fortinet, Enterprise Network Edge offers access to multiple cloud instances and advanced security with throughput speeds up to 100 Gbps, while also supporting remote employees. It delivers a better digital experience for your teams and creates a flexible network that can quickly meet the evolving needs of your organization.

### Powerful, adaptable and fully supported: Enterprise Network Edge enhances the digital experience

Enterprise Network Edge also supports single-site properties that require high-capacity throughput speeds and low latency while providing security mitigation. Spectrum Business® for enterprise provides a consultative approach from design through implementation to ensure a smooth network transition. Available services that can be virtually provisioned include WiFi, switching and virtual edge.

### Enterprise Network Edge creates an SD-WAN environment with security protections throughout your network

---

## Product highlights

- **Scalable performance:** Seamlessly and automatically connect multiple locations when you adopt an SD-WAN solution with low latency, intelligent routing for critical applications and scalability for thousands of locations.
- **Designed for the cloud:** Connect to multiple cloud service providers simultaneously to create a seamless user experience with security features.
- **Enhanced security:** Incorporate firewalls and unified threat management (UTM) with provider-managed, integrated security from the edge to the cloud.
- **Remote work ready:** Enable remote workers to securely connect to your network with support for up to 50,000 people and no additional licenses to buy. Implement enhanced security access to your network from any device, at any time, in any location while protecting your organization.
- **Flexible management:** Choose the level of management you desire, allowing your team to control what they want and consult with us for the rest.
- **Comprehensive control:** Gain visibility into performance, routing, SD-WAN configuration, firewall settings and other network components across locations with a centralized portal.
- **Multiple connectivity options:** Choose the connectivity option that meets your specific needs.
- **Minimize expenses:** Create a more secure, cost-effective SD-WAN solution with no infrastructure to purchase, no hardware to maintain and no vendor lock-in — all for one monthly cost.
- **Several deployment options:** Select the network architecture that best fits your needs — a public/private structure or transition to a fully public network over time.

---

## Benefits

- Support staff productivity across multiple properties and cloud connections for an exceptional digital experience.
- Give staff across your property consistent, high-performing access to the cloud applications that streamline workflows.
- Strengthen the security of your network with automatic updates.
- Extend your network resources to employees at home or on the road to facilitate collaboration and communication no matter their location.
- Minimize time spent on network administration by giving your staff a range of options — from co-managed to a fully managed solution.
- Offer visibility into network usage and performance of your network for faster and better decision-making.
- Expand your connection options with choices such as Dedicated Fiber Internet, Secure Dedicated Fiber Internet, Enterprise Internet, Wireless Internet or Ethernet Services, or bring your own internet, Ethernet or MPLS.
- Lower costs and creates efficiencies compared to MPLS and other private networks.
- Modernize your network while continuing to meet the needs of your organization.

---

## Available services

- **WiFi:** Connect employees and visitors to WiFi that provides speed, reliability and performance with security that begins at the wireless access point.
- **Switching:** Prioritize traffic on the data link and network layers (layers two and three) with cloud-managed, enterprise-grade switching.
- **Virtual edge:** Provide seamless, enhanced security access to your cloud-based, business-critical applications with key cloud service providers.
- **Secure access service edge (SASE) ready architecture:** Spectrum Business for enterprise offers the following integrated, comprehensive and managed protection solutions for networks, users and their workflows, regardless of location. Implement cloud-first, remote or hybrid work solutions to improve cybersecurity while making it easier for resource-constrained IT teams to protect their organizations:
  - **Cloud Security with Cisco+ Secure Connect:** Allow remote users to access cloud SaaS applications and the internet securely and directly without reliance on a traditional centralized or premises-based security solution. This feature-rich cloud-based security service includes secure web gateway, cloud access security broker, identity management, zero trust network access and more.
  - **Secure Access with Cisco+ Duo:** Help protect your organization from unauthorized access to sensitive systems, regulatory violations and data loss that can disrupt your business. Capabilities that include multi-factor authentication and identity management allow IT to set access policies by user and device, regardless of location.
